

DITABIS

Contract Design and Development

ditabis.de

Your Full-Service Partner

DITABIS is a German Contract Design and Manufacturing Organization (CDMO) specialized in medical technology, laboratory equipment, and life-science devices. For 30 years, we have been helping OEMs transform innovative ideas into certified, market-ready products — combining engineering excellence, regulatory expertise, and high-quality manufacturing.

What We Do

Engineering

From the first idea to the production-ready product: we develop mechanics, electronics, firmware, software, and UI under one roof.

Manufacture

At our HQ in Pforzheim, we manufacture Devices in small and medium sized numbers with the highest precision.

Certification

Safety right from the start: We work in accordance with ISO 13485, provide support with necessary approvals, and deliver all documentation.

Life-Cycle-Support

We support your product throughout the whole lifecycle with service, repairs, spare-part support and continuous product care.

Contract Development

DITABIS combines all necessary disciplines to carry out your project successfully:

- Mechanical engineering
- Electronic hardware design
- Firm- & software design
- Prototyping
- Technical Documentation
- and many more

This combination allows us to conduct many different projects, variable in size and complexity.

Our engineering team relies on 30 years of experience with a vast variety of different devices and applications.

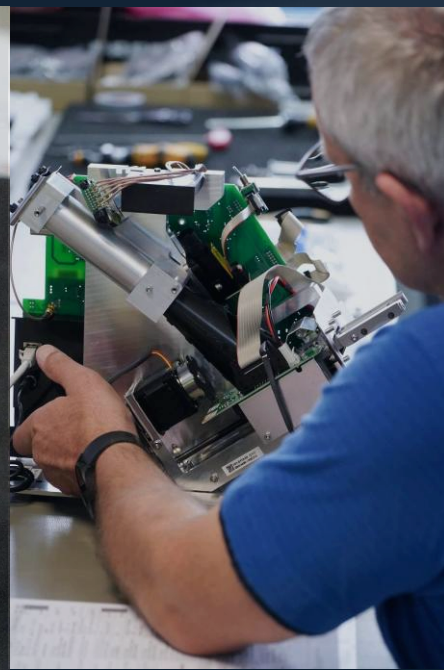

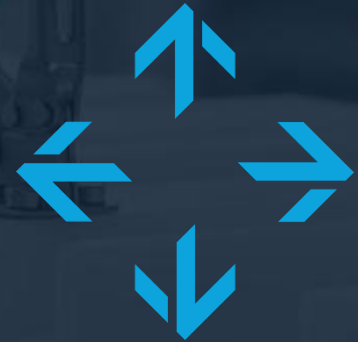

Contract Manufacturing

Quality “Made in Germany” is our pride. At the headquarters in Pforzheim where our production is located, we don't just produce devices - we build trust.

Every detail is crafted with dedication to meet the highest standards.

- Contract manufacturing for internally and externally developed devices
- Made in Germany
- Worldwide supply chain
- ERP based assembly
- In-house QA and logistics

With its team of highly skilled employees, DITABIS is specialized in producing devices in both small and large production numbers. Key to our success is the vast experience in the transition from pre-series to large serial production. This saves time and reduces cost.
